Project - Arbour Path - The Mill Interim Activation, 2020

Client - Archipelago

Product Design - Forrest Gillham, Liam Gillham, Surya Graf

Context

The Mill at Moreton Bay is a major regeneration project by Moreton Bay Regional Council, centered around the new University of Sunshine Coast Campus. The arbour path is the main link between Petrie Train Station and the new USC campus, while also providing a recreational breakout space.

Considerations

Comfortable and engaging connectivity through the open green space between the two main site anchors of USQ and the Petrie Train Station was paramount to populating and activating the space. The design requirements considered including a sculptural covered way of alternate interesting scale and form connection whose form and function encourages use. LED downlights were concealed at the apex of the arbour structures to create an illuminated linear pathway, which provided visual interest and safety of an evening.

Opportunities

Street + Garden formed an integral part of a larger team to deliver the project, which was led by Archipelago. Street + Garden's involvement included rapid development of the design concept of the arbours, moving quickly into production to meet the short project timeline and to be ready for the opening of the USC Campus. Street + Garden furniture elements were also integrated into the path to encourage recreational use of the area.
